

## **Sequelize** Mise en œuvre · Création d'un projet node express à base de vue ejs express sequelize\_mysql • Installation des dépendances NPM dans le dossier sequelize\_mysql npm install create : sequelize\_mysql\bin\www sequelize\_mysql bin change directory: > node modules > cd sequelize\_mysql 🕶 📜 public install dependencies: images > npm install javascripts stylesheets routes views

## **Sequelize**

- Mise en œuvre
  - Utilisation
    - · Modifier users.js dans le dossier routes

```
const express = require('express');
const db = require('../models/index');
var User = require('../models/user')(db.sequelize, db.Sequelize.Da
taTypes);
const router = express.Router();
/* GET users listing. */
router.get('/', function (req, res) {
   return User.findAll().then(result => {res.send(result);})
})
.get('/:id', function (req, res) {
   let id = parseInt(req.params.id);
   return User.findByPk(id).then(result => {res.send(result);})
});
module.exports = router;
```
